

Sustainability Mission Statement 2023 - 2024

Introduction

Capital Coated Steel has worked diligently on its sustainability agenda for many years, beginning with the introduction of the environmental management standard ISO 14001 in 2008. We have worked across the industry on sustainability initiatives, partnering with major customers, co-ordinating activities with our key suppliers and speaking on public platforms.

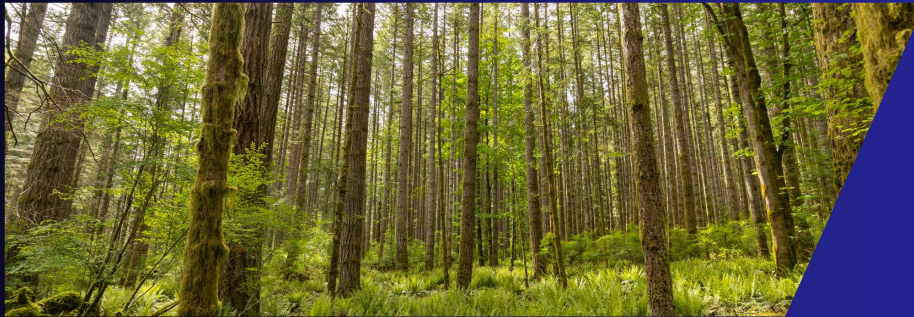

Questions relating to Sustainability reach across many areas. As society evolves the nature of the challenges and opportunities also change. In 2023 Capital has identified seven key areas that the organisation seeks to address, with several inter-related.

Seven Policy areas that matter to us.

- Biodiversity
- Carbon reduction
- Community
- Energy use
- Environmental management
- Waste Management
- Wellbeing

Our sustainability aims

Ensuring business continuity and the reduction or elimination of negative environmental and social impacts of our business activities, so that future generations will have adequate resources to meet their needs. This includes employees, customers, and the wider bio-diverse environment.
